

SIMPLE ATTENDANCE MANAGEMENT INTEGRATED WITH YOUR LEARNING MANAGEMENT SYSTEM

RollCall provides a mobile application for field instructors, supervisors and other learning administrators to select scheduled or unscheduled courses for attendance collection and management. ID badges are scanned by RollCall and real-time coordination between your badge ID system and your LMS validates the learner. When instruction is complete and reviewed, the instructor or administrator simply confirms attendance and it is automatically propagated to the LMS, showing up as learning history.

RollCall streamlines collection of in-person attendance records by providing mobile attendance management access for field instructors, supervisors, and administrators.

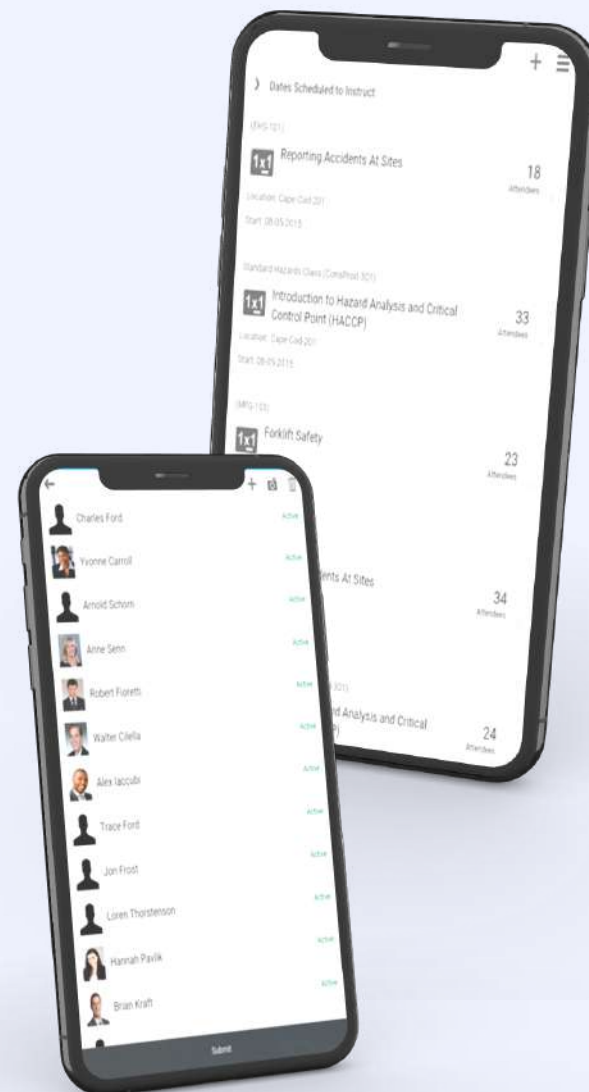

Scanned attendance records are directly recorded and validated in your LMS, improving data quality and ensuring up-to-date training compliance statistics and reports.

RollCall eliminates hardcopy spreadsheets, manual rosters, and duplicate work for your team.

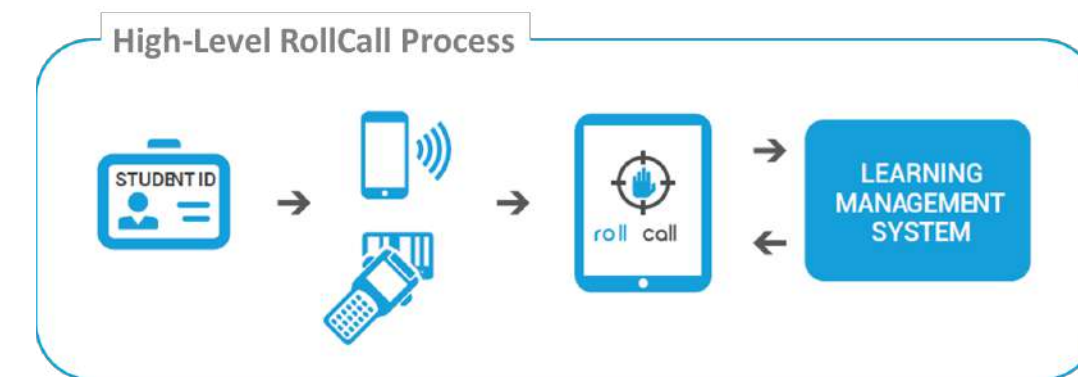

RollCall provides both web-based and mobile instructor interfaces to adapt to organizational variances in badge system requirements and integrates with a variety of badge scanning technologies.

How it Works

RollCall works seamlessly with your LMS to automate attendance management. With RollCall, attendance is directly recorded and validated in your Learning Management System. RollCall provides both web-based and mobile instructor interfaces to adapt to organizational variances in badge system requirements. RollCall integrates with a variety of badge scanning technologies. Our product has established integrations with SAP SuccessFactors Learning and Workday Learning.
